Art Unit: 2652

1. Applicant's election of the species of figures 14-19 in Paper No. 6 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 1-5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 6.

After further review, it is noted that the claims are also related as patentably distinct related inventions in addition to the two species of the invention, one of which having been elected for prosecution. Accordingly, the following restriction is made.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 6, drawn to focus jump method including determining a target lens position of a focus control using a signal obtained by differentiating a focus error signal, classified in class 369, subclass 53.28.
- II. Claims 7-10, 14-17, 19-21, drawn to an optical disc apparatus or corresponding method for focus jump with lens, focus error signal generating means/circuit, moving means/actuator, and laser light power being controlled during focus jump, classified in class 369, subclass 116.
- III. Claims 11-13, 18, 22-24, drawn to an optical disc apparatus for focus jump with lens, focus error signal generating means/circuit, moving means/actuator, and deviation from layer detecting and preventing means, classified in class 369, subclass 44.27.

Art Unit: 2652

3. The inventions are distinct, each from the other because:

Invention I and either one of inventions II or III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as with an apparatus or method for calibrating a focus servo control circuit. See MPEP § 806.05(d).

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as specifically with recording apparatus processing and laser power control circuitry. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to W. R. Young whose telephone and VoiceMail number is (703)
